

Microcurrent Point Stimulation: A New Hope

By I-Hsien Sherwood

Many patients suffer with chronic pain for years without relief.

The causes and workings of pain still aren't fully understood. Pain-related ailments like migraines, fibromyalgia or sciatica can go undiagnosed or misdiagnosed for

years, and treatments aren't always effective. While remedies like physical therapy, prescription narcotics or surgery can alleviate symptoms in some patients, they don't work for everyone.

Cutting edge

As such, the medical community is always looking for promising new treatments, especially those that

are non-invasive and non-pharmaceutical. Recently, one of these therapies, microcurrent point stimulation (MPS) has gained support from practitioners of more standard methods.

MPS uses a handheld device to apply a small electrical current to the acupuncture points utilized in traditional Chinese medicine. "This allows you to stimulate

those acupuncture points without penetrating the skin and potentially having harmful effects of misplacement of the needles, over-penetration of the skin, breaking the skin barrier, infection or other negative effects," says Thomas McClain, an orthopedic surgeon at Mercy Health System in Missouri. "The sensation's not unpleasant at all."

McClain uses an MPS device on friends and family, and he says he's considered using it in a private pain management practice in the future.

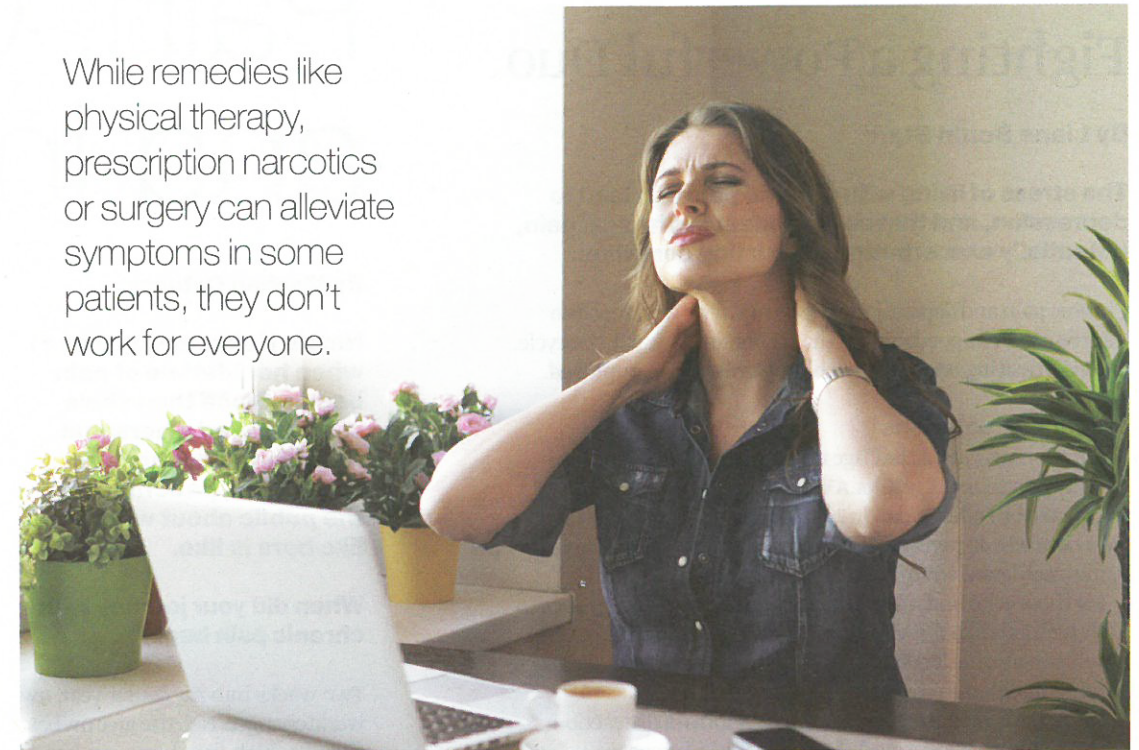

Many other practitioners are already using MPS regularly. "In 15 years in my practice, MPS is by far the safest, the most simple, most effective and the most efficient way to get people out of chronic pain cycles," says Antoine Chevalier, a physical therapist and sustainability coach who has worked with the White House Athletic Center since 2002.

Other applications

Some doctors are seeing results for other conditions, as well. "The swelling in her legs is measurably reduced," said Steven Lins, an anesthesiologist and medical director of surgery at Bronson Battle Creek Hospital in Michigan, after treating a friend's aunt who suffers from pitting edema, a painful buildup of fluid under the skin. "Before, the skin stayed for at least 30 seconds after you pressed in. Now there was a little bit, but it was gone in seconds."

MPS also carries no risk of physical dependence, a growing concern with the potent pain medications currently on the market. "I do believe this is singlehandedly the best thing out there to genuinely help people who are in pain," Chevalier adds. "I'm talking about people with sciatica, chronic pain in the neck—the kind of pain that nobody can solve." ■

While remedies like physical therapy, prescription narcotics or surgery can alleviate symptoms in some patients, they don't work for everyone.

Ancient Wisdom. Modern Technology. Ground Breaking Pain Relief!

For over 5,000 years mankind has tried to harness the power of acupuncture. We succeeded with the **Dolphin Neurostim™**, which gently detects and stimulates acupuncture and trigger points with microcurrent. Trusted by professionals for over 20 years and used in hospitals and clinics throughout the USA, this technology is now available directly to the public for home use. Dolphin is FDA cleared for muscular strains and pain in the **back, neck, arms, and legs**.

**FDA
CLEARED FOR
HOME USE!**

*All natural, safe & highly
effective drug-free pain relief
when & where you need it*

*low impedance points **10K ohms

*Dolphin is the only device
I have ever used where
you **literally see the
tissues change** before
your eyes.*

Dr. Gustavo B. Arrojo, MD
Florida Pain Physician

*I was surprised that the
Dolphin is **so effective
and simple to apply**.
The results are amazing
and eye opening!*
