Nutrition Facts

Serving size: 2 capsules

Servings per container: 30

Amount per capsule

Probiotic blend

2 billion AFU

Clostridium butyricum WB-STR-0006

Clostridium beijerinckii WB-STR-0005

Anaerobutyricum hallii WB-STR-0008

Akkermansia muciniphila WB-STR-0001

Bifidobacterium infantis

Chicory inulin

207mg

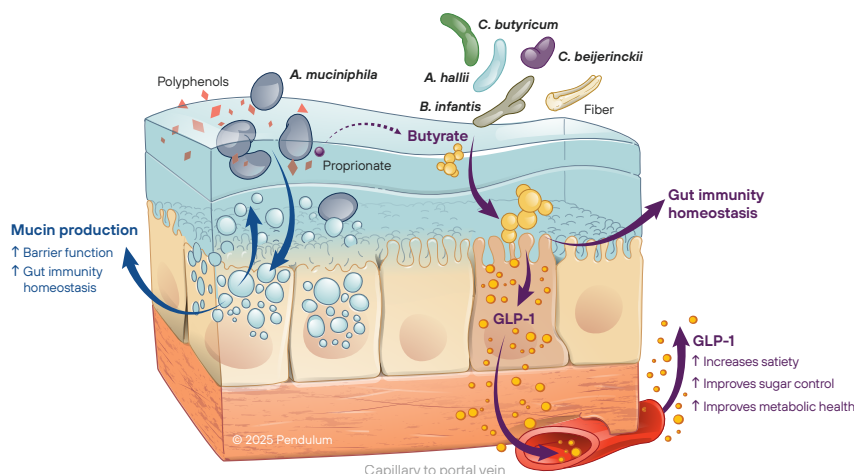

Other ingredients: hypromellose (vegetarian capsule), fruit and vegetable juice (color), magnesium stearate, silica

"Pendulum Glucose Control Pro is a patented medical probiotic formula that combines the five bacterial strains selected to replenish missing functions within the microbiome. The prebiotic inulin is included to provide the initial food source for the probiotic strains. Collectively, this unique formulation, also known as a synbiotic, helps replenish the body's natural capabilities to produce butyrate and assist in the dietary management of people with type 2 diabetes."

ORVILLE KOLTERMAN, MD
Senior Medical Advisor,
Pendulum Therapeutics

Mechanism of action

Pendulum Strains

Mucin fortifier
Akkermansia muciniphila
Primary fermenter
Bifidobacterium infantis

Butyrate producers
Clostridium butyricum
Clostridium beijerinckii
Anaerobutyricum hallii

The powerful ingredients in Pendulum Glucose Control Pro

 Pendulum EXCLUSIVE <i>Akkermansia muciniphila</i> A highly targeted live strain that can only be found in Pendulum products. People with type 2 diabetes are shown to be deficient in <i>Akkermansia</i>, a keystone beneficial strain for gut barrier function and also associated with healthy weight management.	 Pendulum EXCLUSIVE <i>Clostridium butyricum</i> Naturally found in the human gastrointestinal tract, this strain is named for its ability to produce high amounts of the short-chain fatty acid, butyrate. It's been associated with digestion support and immune health.	 Pendulum EXCLUSIVE <i>Clostridium beijerinckii</i> This novel strain produces the short-chain fatty acid, butyrate, which helps the body process sugar and nourish the lining of the gut.
 Pendulum EXCLUSIVE <i>Anaerobutyricum hallii</i> This is another strain known to produce the short-chain fatty acid, butyrate, to help the body process sugar and nourish the lining of the gut.	 <i>Bifidobacterium infantis</i> This strain breaks down a range of foods and produces the intermediate molecules that are used by the three butyrate-producing strains. It also helps maintain a healthy gastrointestinal tract and alleviates digestive issues.	 State of the art delivery capsule Pendulum Glucose Control Pro is encased in a plant-based, acid-resistant, delayed release capsule, so that the strains get through the stomach acid and to the gut microbiome where they can do their job.

Pendulum Pro: Exclusively for healthcare providers

- Premium desiccant-lined packaging ensuring maximum viability
- Two-year shelf life
- Dosing options for tailored patient protocols
- Not available in retail channels
